

# Entitlements and SLAs

In Dynamics 365, **entitlements** refer to a feature that enables organizations to define and manage the level of support or service that a customer is entitled to receive based on factors such as product warranties, service level agreements (SLAs), or purchased service contracts. Entitlements help organizations to effectively track and manage customer service requests by specifying the entitlement terms, such as the duration, number of cases allowed, and other criteria. This allows customer service representatives to ensure that they are delivering the appropriate level of service to customers according to their entitlements.

Key components of entitlements in Dynamics 365 typically include:

1. **Entitlements:** these are the contracts or agreements that specify what level of service or support a customer is entitled to. They can include details such as the entitlement start and end dates, the number of cases covered, and any other terms and conditions.
2. **Entitlement Channels:** these specify how customers can access their entitlements, such as through phone support, email, or a customer portal.
3. **Entitlement Templates:** these are predefined templates that can be used to quickly create new entitlement records with standardized settings.
4. **Entitlements Views and Reports:** these allow users to view and track entitlement usage, such as the number of cases remaining on a particular entitlement.

By effectively managing entitlements, organizations can ensure that they are meeting their contractual obligations to customers while also providing a consistent and high-quality service experience.

Navigate to <https://learn.microsoft.com/en-us/dynamics365/customerengagement/on-premises/developer/entitlement-entities?view=op-9-1> for the official documentation on entitlement entities.

Navigate to <https://learn.microsoft.com/en-us/training/modules/creating-and-managing-entitlements-in-dynamics-365/> for a basic tutorial on how to create and manage entitlements in Microsoft Dynamics 365 Customer Service.

The following figure displays the typical lifecycle of an entitlement:

**Draft:** When an entitlement is first created, it's in Draft status. While an entitlement is a draft, you can edit all the details of the record, including the number of cases, the channels and products, and the coverage dates. You can't attach cases to an entitlement that's in Draft status.

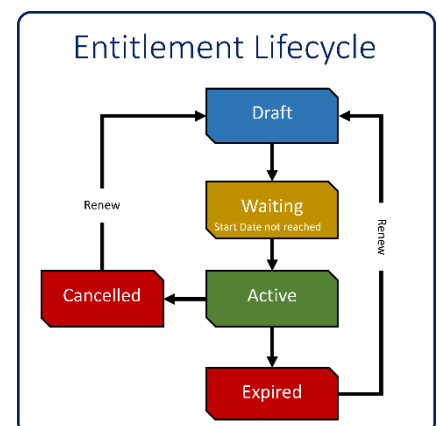

**Waiting:** Entitlements that are in Waiting status have been activated and are waiting for the entitlement start date to be reached. Because the entitlement has been activated, you can't edit any details of the record. Because the start date hasn't been reached, you can't attach cases to the entitlement.

**Active:** An entitlement is considered active when it has been activated and the current date is within the specified coverage dates. While an entitlement is active, new cases can be attached to it, but the details of the entitlement record can't be edited. To edit the details, you must first inactivate the entitlement.

**Expired:** An entitlement expires after the end date is reached. After an entitlement expires, you can't attach any cases to it.

**Canceled:** An entitlement can be canceled at any point while it's active.

**Renewals:** Only expired or canceled entitlements can be renewed.

For these entitlements to be applicable, we need a Customer Service plan. All the functionalities which are related to case creations are in fact available only in a Customer Service app.

Let us open the Customer Service admin center app in Dynamics 365. Hence, we click on Service terms.

The screenshot shows the 'Service terms' page in the Dynamics 365 Customer Service admin center. The left sidebar contains navigation options: Home, Search admin sett..., Guided channel s..., Customer support (Overview, User management, Queues, Routing, Case settings), Agent experience (Overview, Workspaces, Productivity, Knowledge, Collaboration), and Operations (Overview, Insights, Calendar, Service terms, Service scheduling, Miscellaneous). The main content area is titled 'Service terms' with a subtitle 'Track agreements and ensure customers are being supported per the terms you've agreed on.' It features three expandable sections: 'Service Level Agreements' (containing 'Service-level agreements (SLAs)', 'SLA KPIs', and 'Other SLA Settings'), 'Entitlements' (containing 'Entitlements' and 'Entitlement templates'), and 'Other settings'. Each section has a 'Manage >' link.

The important things to be addressed here are Entitlements and Service-level agreements (SLAs).

## 1. Entitlements and cases

In section about entitlements, we click on Manage >.

The screenshot shows the 'All Entitlements' table view in the Dynamics 365 Customer Service admin center. The table has columns: Entitlement Name, Status, Customer, Start Date, End Date, SLA, Entity Type, Allocation, and Remaining. The table is currently empty, displaying 'No data available'. The top of the page includes a toolbar with options like Show Chart, New, Delete, Refresh, Visualize this view, Email a Link, Flow, Run Report, Excel Templates, and Share. The bottom of the page shows '0 - 0 of 0' and 'Page 1'.

Currently we have no entitlements.

Hence, we proceed by clicking on + New.

The screenshot shows the 'New Entitlement' form in the Dynamics 365 Customer Service admin center. The form is in 'Draft' status and has tabs for Customer, Remaining Terms, End Date, and Status. The 'General' tab is active, showing 'INFORMATION' and 'ENTITLEMENT TERMS' sections. The 'INFORMATION' section includes fields for Name, Primary Customer, Start Date, End Date, Restrict based on entitlement terms, SLA, Owner, and Description. The 'ENTITLEMENT TERMS' section includes fields for Allocation Type, Decrease Remaining On, Total Terms, and Remaining Terms. The 'Owner' field is populated with 'Nicola Paracone (Available)'.

First, we have to fill some mandatory fields, such as name of the entitlement, name of customer, start date, and end date. Then we need to specify the entitlement's terms.

The screenshot shows the 'New Entitlement' form in the Dynamics 365 Customer Service admin center. The form is in 'Draft' status and has tabs for Customer, Remaining Terms, End Date, and Status. The 'General' tab is active, showing 'INFORMATION' and 'ENTITLEMENT TERMS' sections. The 'INFORMATION' section includes fields for Name, Primary Customer, Start Date, End Date, Restrict based on entitlement terms, SLA, Owner, and Description. The 'ENTITLEMENT TERMS' section includes fields for Allocation Type, Decrease Remaining On, Total Terms, and Remaining Terms. The 'Owner' field is populated with 'Nicola Paracone (Available)'. The 'Allocation Type' dropdown menu is open, showing options: Number of cases, Number of hours, and Case resolution.

If we select Number of cases as Allocation Type, we can define the number of cases that the customer can create.

The screenshot shows the Dynamics 365 Customer Service admin center interface. The main form is titled 'New Entitlement - Unsaved'. The left sidebar contains navigation options: Home, Search admin sett..., Guided channel s..., Customer support (Overview, User management, Queues, Routing, Case settings), Agent experience (Overview, Workspaces, Productivity, Knowledge, Collaboration), and Operations (Overview, Insights, Calendar, Service terms, Service scheduling, Miscellaneous). The form has a top bar with 'Try the new look' toggle, search, and other icons. The main content area is divided into two panels: 'INFORMATION' and 'ENTITLEMENT TERMS'. The 'INFORMATION' panel contains fields for Name (Alex Baker's Entitlement), Primary Customer (Alex Baker), Start Date (2/7/2024), End Date (2/7/2025), Restrict based on entitlement terms (No), SLA (---), Owner (Nicola Paracone (Available)), Description (---), and Is Default (---). The 'ENTITLEMENT TERMS' panel contains fields for Allocation Type (Number of cases), Decrease Remaining On (Case Resolution), Total Terms (100.00), and Remaining Terms (---). The form is in 'Draft' status, and the customer is 'Alex Baker'.

Instead, if we select Number of hours, we can specify in how many hours the customer can create any number of cases.

The screenshot shows the Dynamics 365 Customer Service admin center interface. The main form is titled 'New Entitlement - Unsaved'. The left sidebar contains navigation options: Home, Search admin sett..., Guided channel s..., Customer support (Overview, User management, Queues, Routing, Case settings), Agent experience (Overview, Workspaces, Productivity, Knowledge, Collaboration), and Operations (Overview, Insights, Calendar, Service terms, Service scheduling, Miscellaneous). The form has a top bar with 'Try the new look' toggle, search, and other icons. The main content area is divided into two panels: 'INFORMATION' and 'ENTITLEMENT TERMS'. The 'INFORMATION' panel contains fields for Name (Alex Baker's Entitlement), Primary Customer (Alex Baker), Start Date (2/7/2024), End Date (2/7/2025), Restrict based on entitlement terms (No), SLA (---), Owner (Nicola Paracone (Available)), Description (---), and Is Default (---). The 'ENTITLEMENT TERMS' panel contains fields for Allocation Type (Number of hours), Decrease Remaining On (Case Resolution), Total Terms (100.00), and Remaining Terms (---). The form is in 'Draft' status, and the customer is 'Alex Baker'.

In the example shown above, a developer will spend a maximum of one hundred hours to solve the cases that the customer opens.

Let us choose Number of cases for the moment. We then have Case Resolution or Case Creation, which have the following meanings:

- Case Resolution: assuming that we have a total of 100 cases, the total count will be decreased only if a case is actually resolved.
- Case Creation: regardless of the status of the case, the count will decrease when the case is created.

Remaining Terms will be automatically populated based on the cases created by the customer. The option Restrict based on entitlements terms set equal to No means that our customers, even if they have already created the maximum number of cases, are still allowed to create extra cases.

Let us save our new record.

The screenshot shows the Dynamics 365 Customer Service admin center interface. The record is titled "Alex Baker's Entitlement" and is in "Draft" status. The "General" tab is selected, showing the "INFORMATION" section with fields for Name, Primary Customer, Start Date, End Date, Restrict based on entitlement terms, SLA, Owner, and Description. The "ENTITLEMENT TERMS" section shows Allocation Type as "Number of cases", Decrease Remaining On as "Case Creation", Total Terms as "100.00", and Remaining Terms as "100.00". The "ENTITLEMENT CHANNEL" section shows "No data available". The "PRODUCTS" and "CONTACTS" sections also show "No data available". The "Timeline" section is at the bottom with a search bar and a note entry field.

Next, we activate it.

The screenshot shows the Dynamics 365 Customer Service admin center interface. The record is titled "Alex Baker's Entitlement" and is now in "Active" status. The "General" tab is selected, showing the "INFORMATION" section with fields for Name, Primary Customer, Start Date, End Date, Restrict based on entitlement terms, SLA, Owner, and Description. The "ENTITLEMENT TERMS" section shows Allocation Type as "Number of cases", Decrease Remaining On as "Case Creation", Total Terms as "100.00", and Remaining Terms as "100.00". The "ENTITLEMENT CHANNEL" section shows "No data available". The "PRODUCTS" and "CONTACTS" sections also show "No data available". The "Timeline" section is at the bottom with a search bar and a note entry field.

Notice that the new entitlement will also appear in the contact record associated with Alex Baker.

The screenshot shows the Dynamics 365 Customer Service admin center interface. The contact record for Alex Baker is displayed. The 'Related' tab is selected, showing a list of related records. The right sidebar contains sections for 'Company', 'RECENT OPPORTUNITIES', 'RECENT CASES', and 'ENTITLEMENTS'.

**Related Records:**

- Introduction mail: Thank for being a valued customer and share details on the interest...
- Meeting from: Jeremy Johnson (Overdue)
- Opportunity: 5 Café A-100 Automatic
- Modified on: 12/17/2023 10:56 AM
- Meeting from: Jeremy Johnson (Overdue)
- Opportunity: 20 Café A-100 Automatic
- Modified on: 12/17/2023 10:56 AM
- Meeting from: Jeremy Johnson (Overdue)
- Opportunity: 5 Café A-100 Automatic

**Company:** Trey Research

**RECENT OPPORTUNITIES:**

- 5 Café A-100 Automatic: €77,500.00, 12/28/2023
- 20 Café A-100 Automatic: €167,000.00, 12/3/2023

**RECENT CASES:** No data available

**ENTITLEMENTS:**

- Alex Baker's Entitlement: Active, Alex Baker

Clicking on Related, we have the Cases section. Here we can create new cases.

The screenshot shows the Dynamics 365 Customer Service admin center interface. The 'Cases' section is selected, displaying the 'Case Associated View'. The table is currently empty, showing 'No data available'.

**Case Associated View:**

| Case Title        | Status | Case Number | Created On |
|-------------------|--------|-------------|------------|
| No data available |        |             |            |

So, let us click on + New Case.

The screenshot shows the Dynamics 365 Customer Service admin center interface. The top navigation bar includes 'Dynamics 365' and 'Customer Service admin center'. The main content area is titled 'New Case - Unsaved' and shows a progress bar with stages: 'Identify (< 1 Min)', 'Research', and 'Resolve'. The 'CASE DETAILS' section includes fields for 'Case Title' (Case 1), 'ID', 'Subject' (Default Subject), 'Customer', 'Origin', 'Contact', 'Entitlement', and 'Product'. The 'DESCRIPTION' section is empty. The 'CUSTOMER DETAILS' section shows 'Alex Baker' from 'Trey Research' with email 'alex@treyresearch...' and phone numbers '619-555-0129' and '619-555-0127'. The 'RECENT CASES' section shows 'No data available'.

Here we should provide a Subject. In another window we navigate to Case settings and access the Subjects area.

The screenshot shows the Dynamics 365 Customer Service admin center interface for the 'Subject tree' settings. The 'Subject tree settings' section includes a toggle for 'Users can only select subjects without children in the subject tree' which is currently 'Off'. The 'Subject tree management' section includes a toggle for 'Show hidden subjects in the subject tree below' which is currently 'Show'. A search bar for 'Search subject' and an 'Add' button are visible. The 'Default Subject' field is also present.

Click on + Add to create a new subject.

The screenshot shows the Dynamics 365 Customer Service admin center interface. On the left is a navigation pane with categories like Customer support, Agent experience, and Operations. The main area is titled 'Subject tree' and contains two sections: 'Subject tree settings' with a toggle for 'Users can only select subjects without children in the subject tree' (set to Off), and 'Subject tree management' with a toggle for 'Show hidden subjects in the subject tree below' (set to Show) and a 'Default Subject' field. On the right, a 'Create a subject' dialog box is open. It has fields for 'Title' (containing 'Test Subject'), 'Parent subject' (with a search icon and 'Look for subject' text), and a 'Description' text area (containing 'This is a subject used to test entitlements.'). Below these is a 'Visibility (featuremask)' section with a 'Yes' toggle. At the bottom right of the dialog are 'Save and close' and 'Cancel' buttons.

Back to our case, after filling the necessary fields we will end up with the following result.

The screenshot shows the Dynamics 365 Customer Service admin center interface with a case record for 'Case 1'. The top navigation bar includes 'Dynamics 365', 'Customer Service admin center', and a 'Try the new look' toggle. Below the navigation pane, the case record is displayed. The 'CASE DETAILS' section shows fields for Case Title ('Case 1'), ID ('CAS-01000-M8N2J3'), Subject ('Test Subject'), Customer ('Alex Baker'), Origin ('---'), Contact ('---'), Entitlement ('Alex Baker's Entitlement'), and Product ('---'). The 'DESCRIPTION' section is empty. The 'Timeline' section shows a recent event: 'Auto-post on Case Case 1: 6:38 PM' created by Nicola Paracone for Contact Alex Baker. The 'Assistant' section shows 'No notifications or suggestions'. The 'CUSTOMER DETAILS' section shows contact information for Alex Baker, including email (alex@treysresearch.com), mobile (619-555-0129), and business (619-555-0127). The 'RECENT CASES' section shows 'Case 1' as active. The bottom of the screen shows '1 of 1' and 'Page 1'.

Notice that had to specify the entitlement to which the case refers, since a customer can possess and number of entitlements at the same time.

If we now look at Alex Baker's entitlement, we will see that the remaining terms have decreased.

The screenshot displays the 'Alex Baker's Entitlement' record in the Dynamics 365 Customer Service admin center. The record is saved and shows the following details:

- General Information:**
  - Name: Alex Baker's Entitlement
  - Primary Customer: Alex Baker
  - Start Date: 2/7/2024
  - End Date: 2/7/2025
  - Restrict based on entitlement terms: No
  - SLA: ---
  - Owner: Nicola Paracone (Offline)
  - Description: ---
  - Is Default: ☐
- Entitlement Terms:**
  - Allocation Type: Number of cases
  - Decrease Remaining On: Case Creation
  - Total Terms: 100.00
  - Remaining Terms: 99.00
- Entitlement Channel:**
  - No data available.
- Products:**
  - No data available.
- Contacts:**
  - No data available.

The left sidebar shows navigation options for Get started, Customer support, Agent experience, and Operations. The top ribbon includes actions like New, Refresh, Check Access, Set As Default, Deactivate, Process, Cancel, Assign, Flow, Word Templates, and Share.

Assuming that we have more than one entitlement for a customer, we can define which entitlement should be considered as the default one (click on Set As Default in the top ribbon). In this way, every time we create a case we will not need to specify the entitlement to which the case refers.

Let us now deactivate the entitlement. The Entitlement Channel section specifies the support channel through which the customer can reach the organization and seek support. We use this section to define the channels our customers are entitled to and track the customer support term for each channel. For example, we can add phone and email as the channels through which we'll offer support. If we want to restrict support through the phone channel to 80 hours and email to 20 hours, we create individual entitlement channel records and add their total terms.

The screenshot displays the 'New Entitlement Channel' form in the Dynamics 365 Customer Service admin center. The form is titled 'New Entitlement Channel' and has a 'Tab' section. The 'Name' field is currently empty, and the 'Total Terms' field is also empty. A dropdown menu is open for the 'Name' field, showing the following options: --Select--, Phone, Email, Web, Facebook, Twitter, and IoT.

The left sidebar shows navigation options for Get started, Customer support, Agent experience, and Operations. The top ribbon includes actions like Save, Save & Close, New, and Flow.

In the following example, the customer is entitled to 20 phone calls and 40 emails for creating cases.

The screenshot displays the 'Alex Baker's Entitlement' record in the Dynamics 365 Customer Service admin center. The record is saved and shows the following details:

- General Information:**
  - Name: Alex Baker's Entitlement
  - Primary Customer: Alex Baker
  - Start Date: 2/7/2024
  - End Date: 2/7/2025
  - Restrict based on entitlement terms: No
  - SLA: ---
  - Owner: Nicola Paracone (Offline)
  - Description: ---
  - Is Default: No
- Entitlement Terms:**
  - Allocation Type: Number of cases
  - Decrease Remaining On: Case Creation
  - Total Terms: 100.00
  - Remaining Terms: 99.00
- Entitlement Channel:**

| Name  | Total Terms | Remaining |
|-------|-------------|-----------|
| Email | 40.00       | 40.00     |
| Phone | 20.00       | 20.00     |
- Products and Contacts:** Both sections show 'No data available'.

We create a new case with Origin equal to Phone.

The screenshot displays the 'Case 2' record in the Dynamics 365 Customer Service admin center. The case is saved and shows the following details:

- Case Information:**
  - Case Title: Case 2
  - ID: CAS-01002-T259V7
  - Subject: Test Subject
  - Customer: Alex Baker
  - Origin: Phone
  - Contact: ---
  - Entitlement: Alex Baker's Entitlement
  - Product: ---
- Timeline:**
  - Recent: Auto-post on Case Case 2: 7:06 PM. Case created by Nicola Paracone for Contact Alex Baker.
- Customer Details:**
  - Name: Alex Baker
  - Company: Trey Research
  - Email: alex@treysresearch...
  - Mobile: 619-555-0129
  - Business: 619-555-0127
- Recent Cases:** Case 2 is listed as Active.

This means that the customer has opened the case by means of a phone call, and therefore the number of phone call available will have decreased by one.

The screenshot shows the 'Alex Baker's Entitlement' record in the Dynamics 365 Customer Service admin center. The record is saved and active. The 'ENTITLEMENT TERMS' section shows a total of 100.00 terms, with 98.00 remaining. The 'ENTITLEMENT CHANNEL' section shows two channels: Email (40.00 total, 40.00 remaining) and Phone (20.00 total, 19.00 remaining). The 'PRODUCTS' and 'CONTACTS' sections show no data available.

| Channel | Total Terms | Remaining Terms |
|---------|-------------|-----------------|
| Email   | 40.00       | 40.00           |
| Phone   | 20.00       | 19.00           |

Suppose now that our customer actually had three total terms and two have already been used.

The screenshot shows the 'Alex Baker's Entitlement' record in the Dynamics 365 Customer Service admin center. The record is saved and in draft status. The 'ENTITLEMENT TERMS' section shows a total of 3.00 terms, with 1.00 remaining. The 'ENTITLEMENT CHANNEL' section shows two channels: Phone (2.00 total, 1.00 remaining). The 'PRODUCTS' and 'CONTACTS' sections show no data available.

| Channel | Total Terms | Remaining Terms |
|---------|-------------|-----------------|
| Phone   | 2.00        | 1.00            |

We create a third case, so that the remaining terms become zero, and then a fourth case.

Such operation, which is allowed because the customer is not restricted on entitlement terms, will result in having Remaining Terms equal to -1.

The screenshot displays the Dynamics 365 Customer Service admin center interface. The main record is titled "Alex Baker's Entitlement" and is marked as "Saved". The record is associated with the customer "Alex Baker" and has a "Remaining Terms" value of "-1.00", an "End Date" of "2/7/2025", and a status of "Active".

The record is divided into several sections:

- General**: Contains the record title, customer name, and status.
- ENTITLEMENT TERMS**: Shows the allocation type as "Number of cases", the decrease remaining on as "Case Creation", total terms as "3.00", and remaining terms as "-1.00".
- ENTITLEMENT CHANNEL**: Shows a table with columns for Name, Total Terms, and Remaining Terms. The table contains one row: "Phone" with 2.00 total terms and 0.00 remaining terms.
- PRODUCTS**: Shows "No data available".
- CONTACTS**: Shows "No data available".
- INFORMATION**: Contains fields for Name, Primary Customer, Start Date, End Date, Restrict based on entitlement terms, SLA, Owner, Description, and Is Default.
- Timeline**: A section for adding notes and events.

## 2. Service-level Agreements

A **service level agreement (SLA)** is an agreement between a service company and a service customer. In a SLA, the customer agrees to a minimum response time based on when the service company records the issue and when the issue is resolved. A SLA enforces a standard level of service that is offered to customers, and also makes it transparent to a service company when a service job should be completed. Any number of SLAs can be created to offer service customers different levels of service.

Navigate to <https://learn.microsoft.com/en-us/dynamics365/supply-chain/service-management/service-level-agreements> for a general introduction.

Navigate to <https://learn.microsoft.com/en-us/dynamics365/customer-service/administer/define-service-level-agreements?tabs=customerserviceadmincenter> if you want to explore how to configure service-level agreements.

At the link <https://learn.microsoft.com/en-us/dynamics365/customerengagement/on-premises/developer/apply-slas-entities?view=op-9-1> we can understand how to enable entities for SLAs.

Let us create a SLA in Power Automate. To do that, we first open our Customer Service admin center app and navigate to Service terms -> Service-level agreements (SLAs).

The screenshot shows the Dynamics 365 Customer Service admin center interface. The left sidebar contains navigation options under 'Customer support' (Overview, User management, Queues, Routing, Case settings), 'Agent experience' (Overview, Workspaces, Productivity, Knowledge, Collaboration), and 'Operations' (Overview, Insights, Calendar, Service terms, Service scheduling, Miscellaneous). The main area displays 'All Service Level Agreements from Unified Interface' with columns: Name, Description, Entity, Status, Is Default, and Owner. The table is empty, showing 'No data available'.

Click on + New. By default, SLAs are enabled for incidents (that is cases).

The screenshot shows the Dynamics 365 Customer Service admin center interface for creating a new SLA. The left sidebar is the same as the previous screenshot. The main area displays the 'SLA Test' form, which is in 'Draft' status. The form has a 'General' tab and a 'Related' tab. The 'General' tab contains fields for Name (SLA Test), Primary entity (Case), and Description. The 'SLA Items' table is empty, showing 'No data available'.

In SLA Items we then click on + New SLA Item.

The screenshot shows the 'New SLA Item' form in Dynamics 365. The form is titled 'New SLA Item - Unsaved' and has a 'SLA Test' preview link in the top right. The left sidebar shows the 'Customer support' section with 'Overview' selected. The main form area is divided into several sections: 'General' (Name: High Priority, KPI: Look for SLA KPI, Allow Pause and Resume: No, Allow Custom Time Calculation: No, Business Hours: ---), 'Applicable When' (And, + Add), 'Pause Configurations' (Configure pause conditions in this section to override entity-level pause configuration defined in Service Configuration and KPI-level pause configuration. + featureDocumentationText +, Override Criteria: No), 'Warn and Fail Duration' (Warn After: 30 minutes, Failure After: 1 hour), and 'Actions' (Actions are used to perform set of tasks depending on whether criteria are met. Before action can be defined, the SLA Item must be saved. + Add).

Next, we click on + New SLA KPI.

The screenshot shows the 'SLA KPI Test' form in Dynamics 365. The form is titled 'SLA KPI Test - Saved' and has a 'Share' link in the top right. The left sidebar shows the 'Customer support' section with 'Overview' selected. The main form area is divided into several sections: 'General' (Name: SLA KPI Test, Owner: Nicola Paracone, Entity Name: Case, KPI Field: First Response By KPI, Applicable From: Created On), 'Pause Conditions' (Configure pause conditions in this section to override entity-level pause configuration defined in Service Configuration. Learn more, Override Criteria: No), and 'Actions' (Actions are used to perform set of tasks depending on whether criteria are met. Before action can be defined, the SLA Item must be saved. + Add).

As last step here, click on Activate.

Click to set actions **Configure Actions** **Configure Actions**

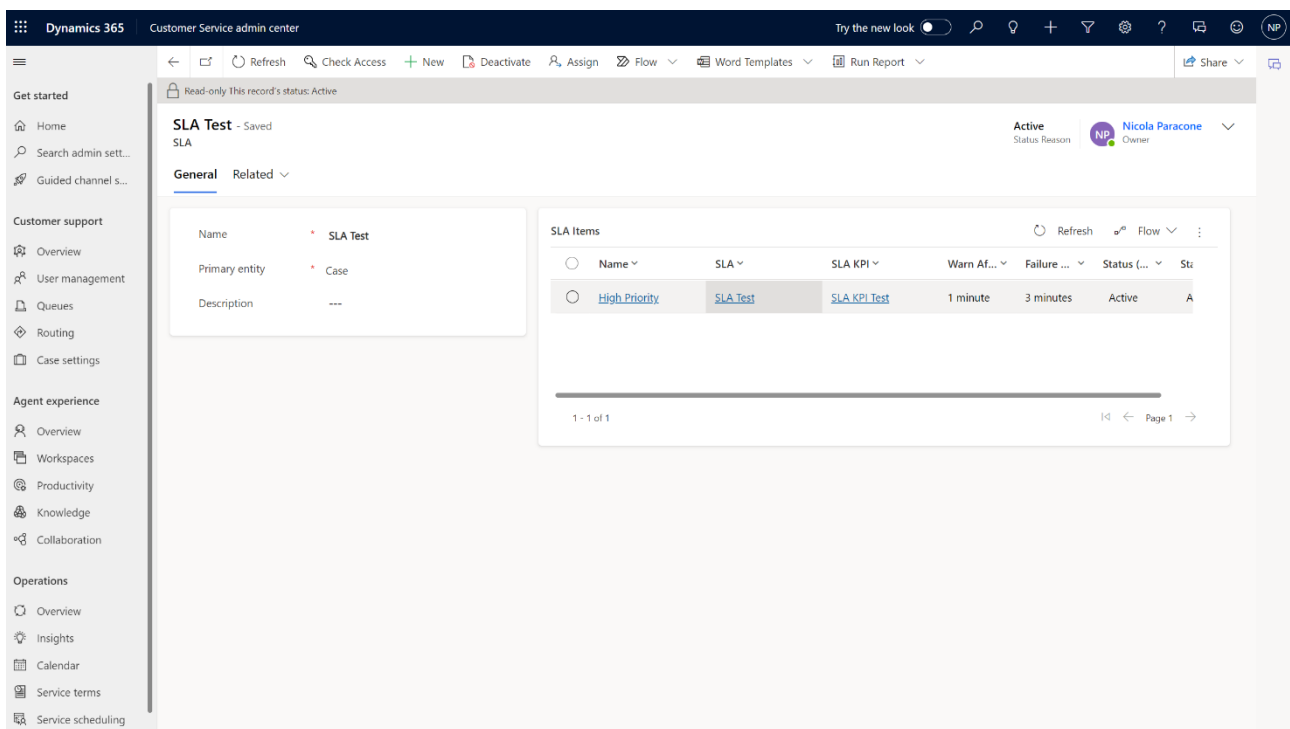

Clicking on Configure Actions will open a Power Automate window.

Save the flow. Then come back to the SLA and activate it.

We also set it as default.

At this point, we already have an entitlement which we can modify and add to it the newly created SLA.

The screenshot shows the Dynamics 365 Customer Service admin center interface. The main record is 'Alex Baker's Entitlement' (Entitlement). The record is active and has a status of 'Active'. The record is associated with the customer 'Alex Baker' and has a start date of 2/7/2024 and an end date of 2/7/2025. The SLA is 'SLA Test' and the owner is 'Nicola Paracone (Available)'. The record is set as the default entitlement.

**ENTITLEMENT TERMS**

| Allocation Type       | Number of cases |
|-----------------------|-----------------|
| Decrease Remaining On | Case Creation   |
| Total Terms           | 3.00            |
| Remaining Terms       | -1.00           |

1 - 1 of 1 | Page 1

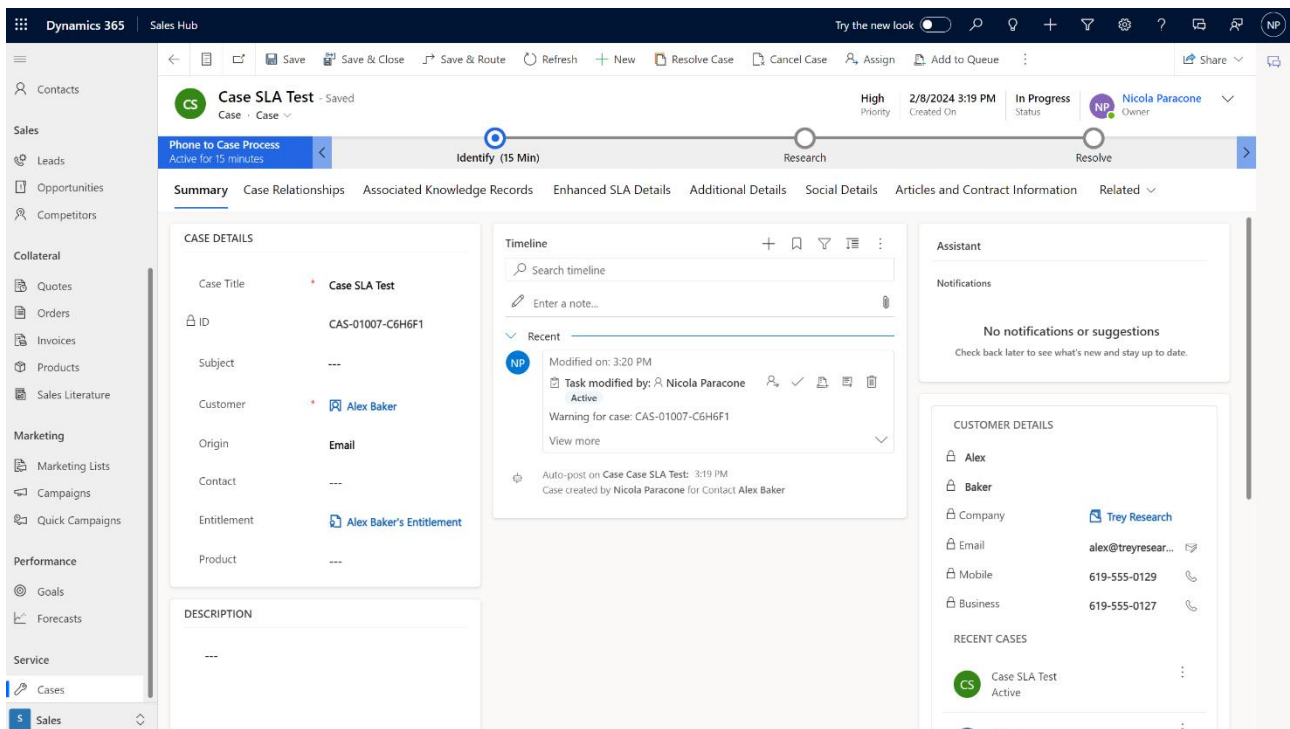

Now the SLA has been triggered.

Assuming that we let go the countdown to zero without doing nothing.

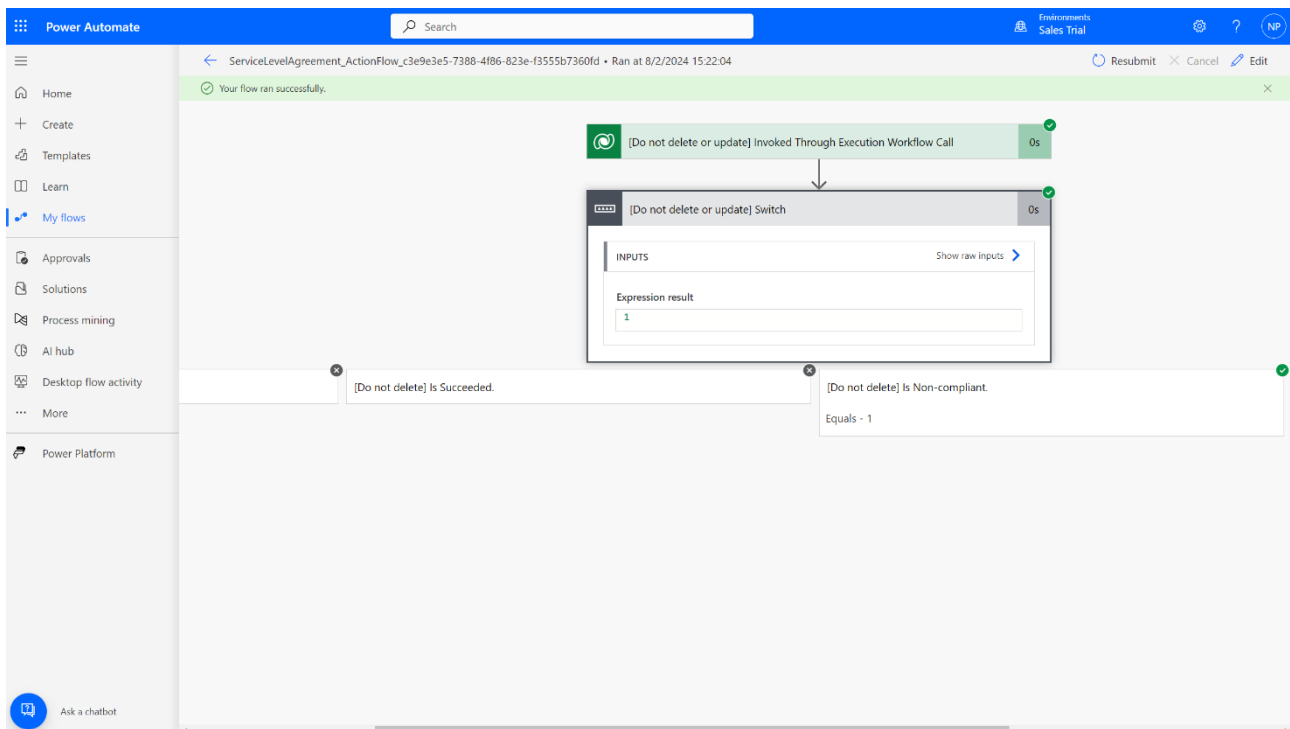

The screenshot shows the Microsoft Dynamics 365 interface for a 'Case SLA Test'. The case is in the 'Identify' stage, which is active for 13 minutes. The status is 'High Priority' and 'In Progress', created on 2/8/2024 at 3:19 PM. The owner is Nicola Paracone. The interface includes a left-hand navigation pane with categories like Sales, Collateral, Marketing, Performance, and Service. The main content area shows a 'Phone to Case Process' with a 'First response in' field indicating 'Expired'. Below this, there is a table with columns: Name, Status, Failure Time, Warning Time, Succeeded, and Active Duration. The table contains one row: 'SLA KPI Test' with a status of 'Noncompliant', failure time of '2/8/2024 3:22...', warning time of '2/8/2024 3:20...', and an active duration of '3'. The bottom of the table shows '1 - 1 of 1' and 'Page 1'.

Our flow will have been triggered near non-compliance and have created the task.

The screenshot shows a Microsoft Power Automate flow diagram. The flow is titled 'ServiceLevelAgreement\_ActionFlow\_c3e9e3e5-7388-4f96-823e-f3555b7360fd' and was last run on 8/2/2024 at 15:20:04. The flow starts with a 'Your flow ran successfully' message. It then branches into two paths based on a condition: '[Do not delete] Is Near Non Compliance.' and '[Do not delete] Is Succeeded.' The 'Near Non Compliance' path contains two steps: 'Get a row by ID' (0s) and 'Add a new row' (3s). The 'Add a new row' step has inputs: Table name (Tasks), Priority (2), Regarding (Cases) (incidents(9d846679-dec9-483c-a93d-130e162aa753)), and Subject (Warning for case: CAS-01007-C6H6F1). The 'Is Succeeded' path is currently empty.

However, since we didn't perform any action, the flow will also go to the non-compliant block, which we didn't configure with any particular action.

Click on Automatic record creation and update rule.

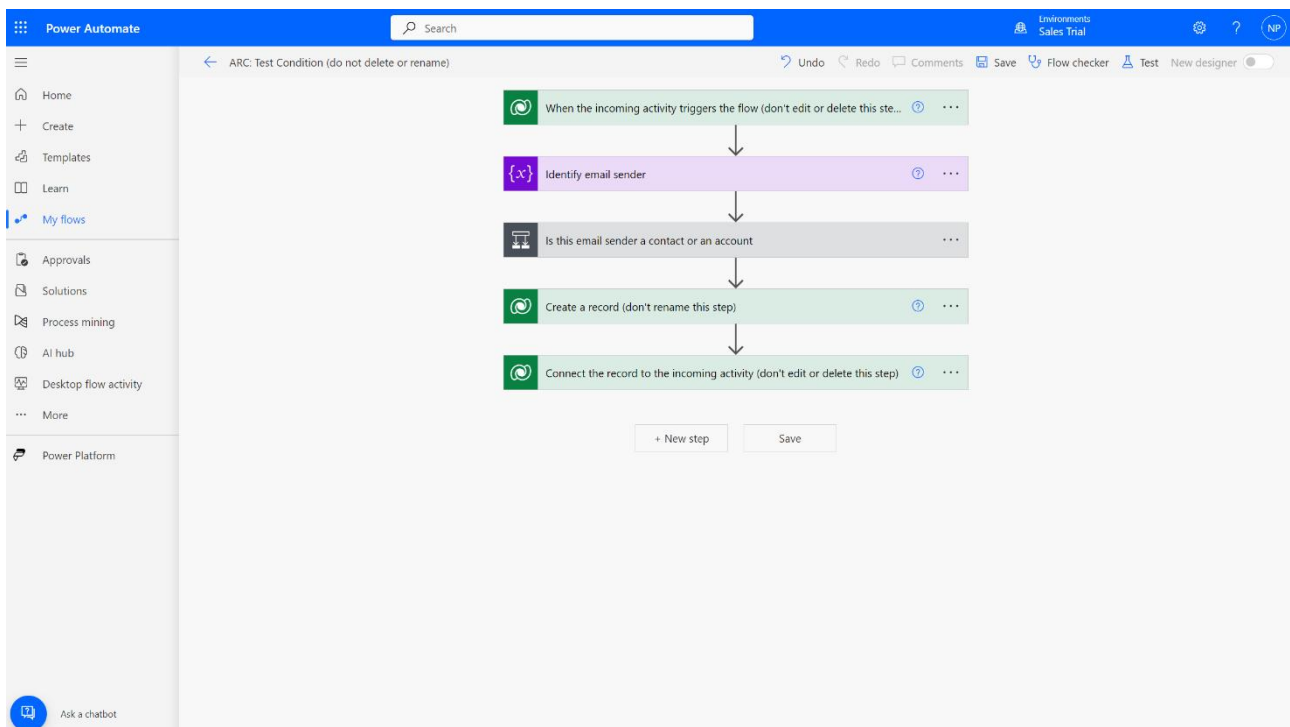

Next we click on + New. Assume that we have a service account where our customers can send emails. When an email is received, we want to automatically create a case.

Notice that also the queue to be monitored has to be chosen. However, adding the mail box to the queue is an operation which only an administrator can do.

If the subject of the email, we receive contains “help” we want to take some action. Hence, we click on Save and open Power Automate.
